

Hello,

Please complete the below assignment in Node Js or Java or PHP or any programming language of your choice and share the results over github link.

There is an API which is built in NodeJs using Express or JAVA . This API is consumed by multiple partners eg: Partner A , Partner B .

You need to create a simple dashboard which shows the count of the number of requests the API has received and by which partners.

Task to be done:

Create a simple GET API in Node using express / Java.

Simple dashboard page or a page that shows the following information :

Total number of requests served.

Total requests served based on partners.

Filter by date/time
